

ABSTRACT OF THE DISCLOSURE

A method and apparatus for producing bent snowmobile studs for use in an assembly are disclosed. The assembly comprises a bent stud having a head and proximal and distal shank portions and a fastener which is adapted to connect with
5 respect to the distal shank portion of the stud. The head and shank of the stud are engaged by members which are mechanically pivoted with respect to one another such that the shank is bent. The assembly prevents rotational movement between the stud and the track.
